

# US financial firm using EPAS for SOX and regulatory compliance

**Firm size: \$10B**

“ Implementation Is Easy, And The ROI Realized Is Almost Instantaneous ”

“ The product is second to none but what sets the vendor apart is their personal support, service and knowledge. The Detack team as a whole provides best in class support and response to questions/issues ”

Director Security Architecture & Engineering

## OVERVIEW

The customer needed to meet a variety of requirements in a highly regulated environment, as well as improve cyber resilience by strengthening authentication. The bank wanted a solution to provide automation and monitoring to implement missing capabilities for compliance and regulatory needs.

## SOLUTION

EPAS: “The thing I like most is the SOX and regulatory compliance in addition to the ease of use of the platform. From A to Z everything is documented, and custom implemented as needed.”

## CONCLUSION

“Understand the value in what password quality assurance really is. Also, understand how structural integrity of passwords relate to your business. Additionally, dig deep into the gaps of enforcing passwords in your environment such as through GPO or pam/cracklib configurations. You may assume there are no gaps, but I promise you as a security professional that there are.”
